S² Statistical Solutions hires Warren Timmer, BS, as Chief Information Officer

Leader in Data Mining & Economic Analysis for the Health Care Industry Hires Talent to Introduce New Processes and Build Infrastructure

Cincinnati, Ohio, December 21, 2011— S² Statistical Solutions, Inc., a leading provider of data mining and economic analysis for medical device, diagnostic, and biopharmaceutical companies, is pleased to announce the hiring of **Warren Timmer** as Chief Information Officer. In this newly created position, Mr. Timmer plans to build an infrastructure that will streamline the company's statistical processing, allowing S² to expand capacity and continue its rapid growth.

"We are looking to Warren to take our company to the next level by introducing processes that will enable us to perform data analyses more efficiently. And by expanding our infrastructure, we will have the support we need to work faster and smarter, and we can keep growing," says Dr. Candace Gunnarsson, President and Founder of S² Statistical Solutions.

Prior to joining S², Mr. Timmer spent twelve years as President of Innovative Systems & Software, Inc. (ISS), a Cincinnati-based company specializing in IT consulting, enterprise development, and information security. ISS services many industries, including Fortune 500 companies in the aerospace, manufacturing, banking, and insurance markets as well as government and defense. Before ISS, Mr. Timmer was employed at Northrup Grumman, a leader in computer networks and cyber security, where he specialized in information warfare. In this capacity, he developed strategies for protecting information and securing communications, all related to the US government.

Mr. Timmer holds a BS degree in electrical engineering from Rose-Hulman Institute of Technology in Terre Haute, Indiana.

About S2 Statistical Solutions, Inc.

S² Statistical Solutions is a fast-growing, woman-owned small business that helps medical device, diagnostic, and biopharmaceutical companies utilize the power of analytics to support their products. The company uses a closed-loop process, leadership, and scientific team members to focus on delivering a RETURN ON INFORMATION that will drive stakeholders to take action. Results gained from this dynamic approach are often reported in peer-reviewed journal publications as well as poster, podium, and slide deck presentations. The company's key activities include data mining of large-scale electronic medical record and administrative databases, statistical analysis, comparative effectiveness research, and published literature compilation. Currently, S² has developed CitationPoint, a customizable software interface that allows companies to pull up endpoints of interest from the published literature.
