

statistical solutions

CLINICAL RESEARCH JOB OPENING

S² Statistical Solutions, Inc. is a growing statistical analysis company based in Cincinnati, Ohio, focused on providing clients with strategic direction for outcomes research, epidemiology studies, and benchmarking. As an integrated team, we use our wide range of economic and analytic capabilities to study disease incidence, prevalence, and progression. We investigate medical practice patterns, identify unmet needs, study medical device usage, and generate high-quality clinical outcomes information.

Our work has premiered in numerous peer reviewed journals and many of our clients are Fortune 500 companies in the medical industry.

S² also has information content software, CitationPoint™, a customizable software interface that allows the user to pull important endpoints from the published literature.

We are looking for a talented **clinical researcher**. The position is responsible for organizing and leading systematic literature reviews in a variety of areas in the medical industry. Strong clinical knowledge must be applied to 1) defining the literature search 2) extracting meaningful information from the literature 3) condensing the results into a usable format and 4) communicating the results internally and with S² clients. The position will also be responsible for guiding and verifying the content in CitationPoint™. The successful candidate must have strong proven skills in research methods, be able to work without supervision, and be committed to the growth of the company.

JOB TITLE: Clinical Research Lead

Essential Functions:

- In addition to leading the literature reviews, the Clinical Research Lead will draft and finalize project deliverables such as reports and presentations.
- Contribute to drafting abstracts and manuscript, as well as consult on other studies
- Participate in development of client specifications
- Provide communication on current research areas relevant to S2 business direction
- Support other S2 activities as needed, i.e., collaborate with other S2 team members on proposals, data analysis and interpretation of internal results and published literature
- Occasional travel to client meetings may be required

Education

Required: Master's Degree in Public Health and/or Nursing

Preferred: Doctorate in Pharmacy, Nursing, Public Health or closely related field

Required Skills

- 5+ years of experience working on systematic literature reviews and Meta analyses
- Strong knowledge and passion for research principles and familiarity with key aspects of the literature (historical and current)
- Extensive knowledge of state of the art research tools
- MS Office (Word, PPT, Excel, Access), Endnote, Refworks & similar software packages
- Comfortable in database searches/queries
- Strong teamwork and interpersonal skills
- Able to work within project budget and complete deliverables in a timely manner
- Able to communicate clearly to both internal team members and clients

Salary and Benefits

Salary will be commensurate with experience

S² offers a full benefits package
